## What Can Netsync Do For You? Business-Focused, Customer-Driven

Netsync is an NMSDC-certified minority business enterprise (MBE), a federally certified woman-owned small business (WOSB), and a HUB-certified value-added reseller (VAR) specializing in the implementation of comprehensive IT lifecycle solutions for a wide array of organizations.

# NETSYNC

Our team of engineers bring tangible business value to every project through our progressive Design, Build, Deliver, and Manage methodology, allowing them to tailor solutions for each client based on time, budget and desired outcome.

Netsync is a Cisco Gold, Master Collaboration, Master Networking, Master Service Provider and Master Security Partner, an HP and Intel Platinum Partner, and holds certifications and specializations from many of the industry's leading technology manufacturers. Netsync has extensive experience performing large-scale implementations and deploying complex IT solutions for K-12 and higher education institutions, civic organizations, municipalities, government agencies and corporate clients across several industries, including energy, healthcare, retail and financial services.

Based in Houston, Texas, Netsync uses a blended approach that is both consultative and collaborative when working with clients. We assess customers' needs, architect innovative technology solutions to meet those needs, and offer 24/7/365 access to our team of seasoned, professional engineering experts. This approach has earned Netsync numerous customer service excellence awards and recognition as a progressive partner that introduces the newest, best-of-breed products and solutions to clients.

## Expertise across all practices delivers results

Solving real-world challenges requires technical mastery in an ever-evolving landscape, which necessitates an investment of time and personnel that few organizations can afford. Whatever the business priority—optimizing performance, improving reliability, reducing costs or increasing efficiency—Netsync helps organizations embrace transformative innovation with a wide variety of practice proficiencies, including:

### Enterprise Networking and Wireless

Netsync specializes in constructing complex enterprise networking and wireless solutions for organizations. We architect scalable, flexible systems that turn the enterprise networks of old into transformational infrastructures that help businesses do more business.

### Data Center

Netsync can architect, source, install and manage servers that empower and propel vital business capabilities. We hand-select devices from our extensive partner relationships to tailor an approach for every organization's unique challenges.

### Cloud

Whether you're thinking about a total cloud migration or building a hybrid system by retaining some applications and services on-premises, Netsync can design the perfect solution for your organization, which includes design, implementation, migration services, and long-term monitoring and management.

### Security

Netsync realizes that security today involves every form of asset, both physical and virtual. It's important for businesses to invest in advanced threat analysis to prevent the infiltration of critical network and data storage systems.

### Services

In addition to its comprehensive practice expertise, Netsync offers businesses additional services that enable an effortless adoption of IT solutions by designing, building and managing the right solution for your unique business challenges.

### Managed Services

Netsync Managed Services allows you to get back to focusing on your business objectives while we take care of the daily challenges involving people, processes and technologies. We provide service desk support, MACDs, alerts with remediation, release and change management, digital labor, and much more.

### Customer Experience

Netsync's customer experience systems are designed to increase your peace of mind while we take care of the details you're too busy to look after. We can manage contracts, stay on top of the lifecycles of your equipment, work with you to get financing for big projects, and more.

### Collaboration

As a Cisco Master Collaboration Partner, Netsync helps you identify unique business challenges, and designs, deploys and maintains a wide array of solutions that make working together simple, which ensuring your business has an intuitive and innovative way to stay connected anywhere, and on any device.

### Internet of Things

IoT applications are expanding every day. Classrooms benefit from higher degrees of device integration, and even city municipalities are embracing the benefits of smart technology. Netsync advises organizations on practical IoT applications that reduce costs, improve metrics and maximize convenience.

### Optical/WAN

Netsync works with enterprises to devise, procure and implement a network architecture capable of supporting strategic business priorities. Optical network solutions are ideal for data storage centers and serve as the backbone of IoT and Smart City initiatives.

### Service Provider

To help retain customers and improve business outcomes, Netsync partners with service providers to reinforce existing operational platforms, replace aging ecosystems and source end-user devices to enable the highest levels of productivity.
